

The difference between average and best is the attention to details

To appreciate the uniqueness of architectural designs of the 7 wonders in China, Brazil, South America, Mexico, Rome, India and Jordan, an ISA Project titled: Architectural Insight to the seven wonders of the World was taken up by the students of **Arvind Gupta DAV Centenary Public School, Model Town**. The project was initiated with the purpose of stimulating critical thinking to analyze the concepts of mathematics involved in the construction of these buildings. Students of class VIII prepared photo story. Learning and understanding of the architectural styles of the Seven Wonders of the World was shared with students of class V and VI. Students imparted knowledge about history,

facts and application of mathematics involved in designing the building.

It was a unique and pleasant experience for the students to get insight of construction and magnanimity of the structures. The complete ride - beginning from discussion, collecting information, working together, hopping the hurdles and finally reaching to the destination of conducting assembly was a learning experience.
